Hi John,

I have spoken to our Engineer Mohan Seyan and his initial comments is all about the cover to the reinforcement and the temperatures generated. Covers could be different for different elements of the structures. The most critical element is the columns protection. I know this is not much but if you have further information and need assistance, please let me know.

All the best  
Nasser

Thanks all.

Have now gleaned the fr information about cover and column/beam size from our retained engineer.

**Subject:** CONFIDENTIAL - Grenfell Tower fire

Good morning All,

Further to the dramatic news that we have all awoken to this morning and the images of Grenfell Tower, I can advise you that John Allen is currently at the scene. Jay from Hammersmith has spoken to John (as did Anthony earlier offering LDSA help and support) asking if he required any help. John advised that at the moment he is on site, but there was nothing that he could do at present, however he did say that the building was built in 1974 and is a reinforced concrete building and if anyone has structural engineers that have direct experience of reinforced concrete behaviour in fire situations, it would be useful to know. There is speculation that collapse may be possible, although it is thought that the building was built under the revised regulations at the time that dealt with progressive collapse, however partial collapse may be possible.

If you should have engineers (or surveyors for that matter) who have experience of rf concrete in fire and/or high rise fires etc, please can you email John Allen (copy both Anthony and myself, as John's emails/phone will be overloaded)?

Thank you

Bob
